

Am.languida Maxent Modeling Report

1. Species Information

- **Common Name:** Am.languida
- **Scientific Name:** Dexteroporum az.
- **Region:** 南海北部
- **Occurrence Points:** 42
- **Generated Time:** 2025-05-19 00:36:57.080454

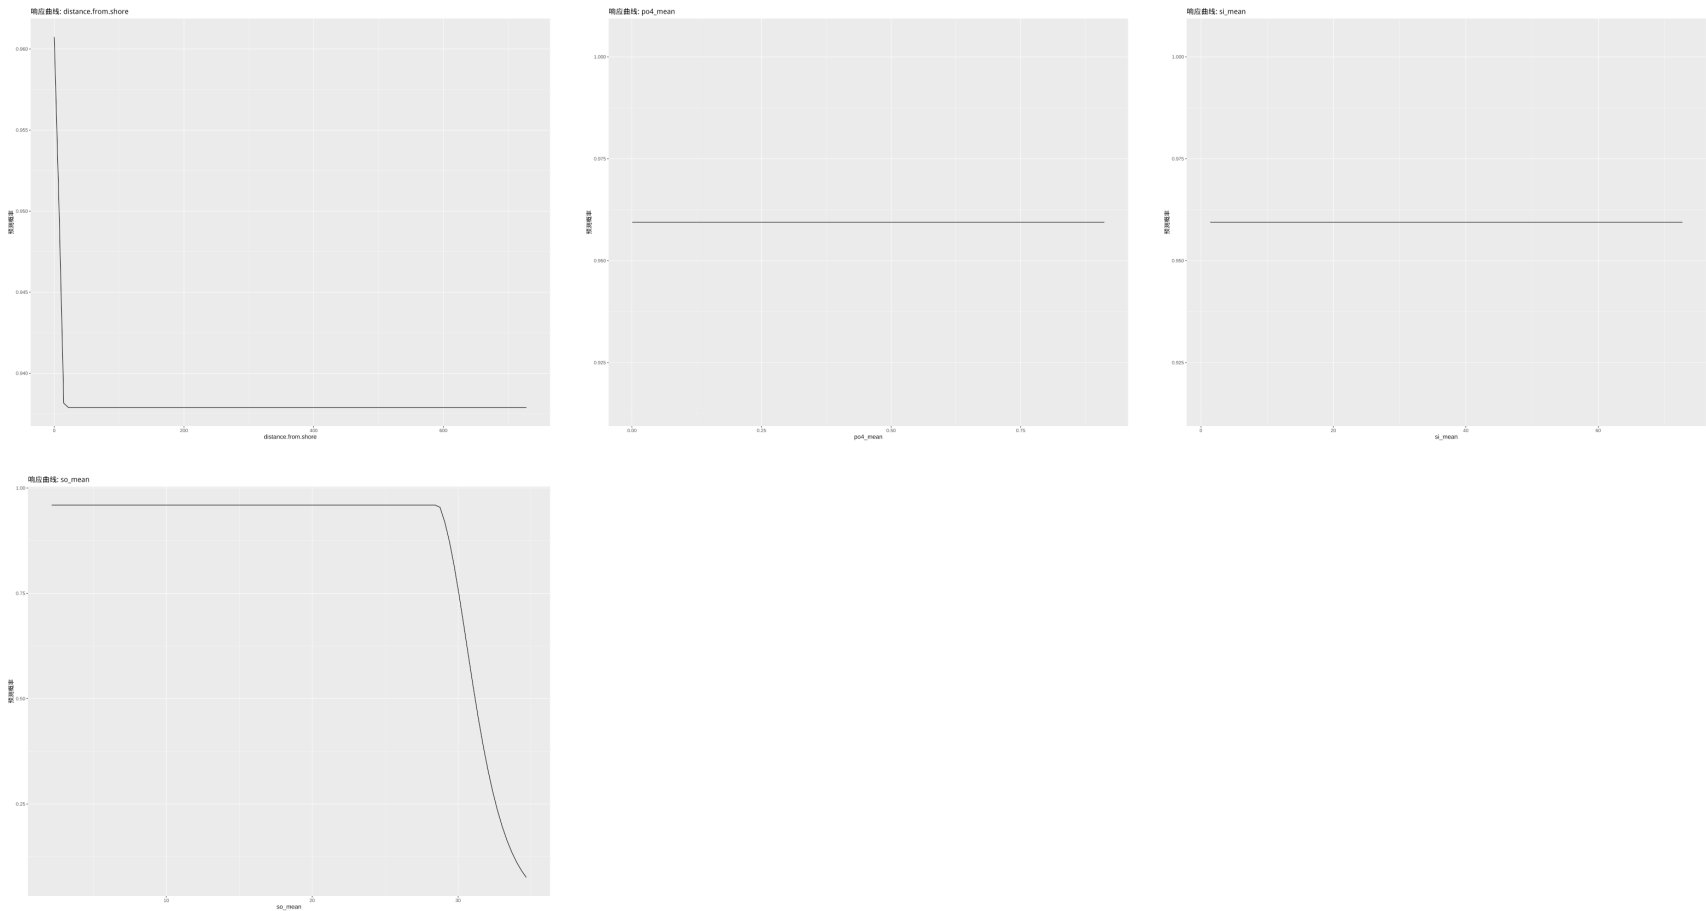

2. Optimal Parameters

Below is the optimal combination of feature classes and regularization multiplier:

Optimal Parameters

rm_best	fc_best
2	H

3. Response Curves

4. Jackknife Analysis

Jackknife Variable Importance Plot

Jackknife Results Table

Jackknife Results

variable	gain_only	gain_without	gain_full
distance.from.shore	NA	-0.6378641	-0.6634729
po4_mean	NA	-0.6485359	-0.6634729
si_mean	NA	-0.6537558	-0.6634729
so_mean	NA	-0.6466607	-0.6634729

5. Predicted Probability Raster

Predicted Probability Raster Path: Am.languida_prediction.png

6. Additional Figures

7. Report Notes

- This report is automatically generated by the Maxent modeling script. All parameters and results are rendered based on the input data.
- Response curves, Jackknife plots, and other visualizations support batch processing.
- For further analysis or report customization, please contact the technical team.
